# SafeLane HN - Cycling safety priority list Heilbronn

Generated 2026-10-28

Data: ATRAI senseBox:bike, Heilbronn. Data generated 2026-10-28. 6,642 street segments with measurements, 5,106 with enough data to rank, 863 with recorded overtakes.

## Top 20 priority streets

| Rank | Street | Score | Measure-ments | Overtakes < 150 cm | Main reason |
|---|---|---|---|---|---|
| 1 | Path along Pfaffenstraße | 76.1 | 1,273 | 100% of 35 | 100% of 35 overtakes were closer than 150 cm |
| 2 | Theodor-Fischer-Straße | 75.5 | 79 | 100% of 46 | 100% of 46 overtakes were closer than 150 cm |
| 3 | Path along Wilhelmstraße | 75.3 | 221 | 100% of 20 | 100% of 20 overtakes were closer than 150 cm |
| 4 | Unnamed street | 75.2 | 172 | 100% of 30 | 100% of 30 overtakes were closer than 150 cm |
| 5 | Path along Gartenstraße | 75.2 | 60 | 100% of 53 | 100% of 53 overtakes were closer than 150 cm |
| 6 | Kaiserstraße | 74.6 | 549 | 100% of 46 | 100% of 46 overtakes were closer than 150 cm |
| 7 | Theodor-Fischer-Straße | 74.6 | 202 | 100% of 202 | 100% of 202 overtakes were closer than 150 cm |
| 8 | Haigernstraße | 74.5 | 902 | 100% of 89 | 100% of 89 overtakes were closer than 150 cm |
| 9 | Path along Kirchbrunnenstraße | 74.2 | 285 | 100% of 25 | 100% of 25 overtakes were closer than 150 cm |
| 10 | Unnamed street | 73.9 | 1,291 | 100% of 15 | 100% of 15 overtakes were closer than 150 cm |
| 11 | Austraße | 73.4 | 234 | 100% of 65 | 100% of 65 overtakes were closer than 150 cm |
| 12 | Path along Bismarckstraße | 73.3 | 433 | 100% of 4 | 100% of 4 overtakes were closer than 150 cm |
| 13 | Unnamed street | 73.2 | 399 | 92% of 131 | 92% of 131 overtakes were closer than 150 cm |
| 14 | Path along Kreuzäckerstraße | 73.1 | 239 | 100% of 26 | 100% of 26 overtakes were closer than 150 cm |
| 15 | Max-Planck-Straße | 72.8 | 135 | 92% of 24 | 92% of 24 overtakes were closer than 150 cm |
| 16 | Path along Weipertstraße | 72.7 | 500 | 97% of 62 | 97% of 62 overtakes were closer than 150 cm |
| 17 | Path along Spitzwegstraße | 72.7 | 46 | 100% of 13 | 100% of 13 overtakes were closer than 150 cm |
| 18 | Unnamed street | 72.5 | 483 | 100% of 28 | 100% of 28 overtakes were closer than 150 cm |
| 19 | Turmstraße | 72.2 | 270 | 92% of 24 | 92% of 24 overtakes were closer than 150 cm |
| 20 | Path along Obereisesheimer Straße | 72.1 | 416 | 100% of 13 | 100% of 13 overtakes were closer than 150 cm |

## Method

Each street segment gets five factors from 0 to 1: share of close passes under 150 cm, danger points per 100 m, surface roughness, fine-dust risk and stop-and-go traffic.

Default weights: Close passes 35%, Danger spots 25%, Rough surface 15%, Fine dust 15%, Stop-and-go 10%.

Score = 100 x confidence x weighted sum of the factors, from 0 to 100; confidence = min(1, measurements / 30).

Only segments with at least 5 measurements are ranked; ties go to the segment with more measurements.

The main reason is the factor that adds the most to the score at the default weights.

## Data limits

- Riders chose their own routes, so popular streets have more data. A street with no data is not safe, just unmeasured.
- Passing cars are detected by AI. It misses some and miscounts others, so a single value can be off.
- Some streets have only a few measurements. Their scores are less certain and are scaled down by the confidence factor.
